                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Submitted (19-NOV-2002) Human Genceme Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA On Nov 19, 2002 this sequence version replaced gi:23802942.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, assembly (a 'contig-scaffold'). Within each contig-scaffold, and sequence only sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Valas, R., Vera, V., Villasana, D., Waldron, L., Walker, B., Wang, J., Wang, Q., Wang, S., Warren, J., Warren, R., Wei, X., White, F., Williams, G., Willson, R., Wleczyk, R., Wooden, H., Worley, K., Wright, D., Wright, R., Wu, J., Yakub, S., Yen, J., Yoon, L., Yoon, V., T., Zhang, J., Zhou, J., Zhou, J., Zhao, S., Dunn, D., von Niederhausern, A., Weiss, R., Smith, D.R., Holt, R.A., Smith, H.O., Weinstock, G. and Gibbs, R.A.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               NOTE: Estimated insert size may differ from sequence length
(see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

NOTE: This is a 'working draft' sequence. It currently
consists of 1 contigs. Gaps between the contigs
are represented as runs of N. The order of the pieces
is believed to be correct as given, however the sizes
of the gaps between them are based on estimates that have
provided by the submittor.

All repeats were identified using RepeatMasker: Smit, A.F.A. & Green, P. (1996-1997) http://ftp.genome_washington.edu/RM/RepeatMasker.html
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Direct Submission
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   NOTE: This record contains 81 individual sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          will be sequenced to completion. In the event that the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Web site: http://www-seq.wi.mit.edu

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         of Molecular and Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On Nov 19, 2002 this sequence version replaced gi:23603299.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may excend beyond the ends of the clone and there may be sequence genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Submitted (19-FEB-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA (Oases 1 to 232344)

Submitted (09-OCT-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On Sep 14, 2002 this sequence version replaced gi:21909412. The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequening reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). As a result, the sequence may extend beyond the ends of the clone and there may be contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Steimle, M., Strong, R., Sutton, A., Svatek, A., Tabor, P., Taylor, C., Taylor, T., Thomas, N., Thomas, S., Tingey, A., Trejos, Z., Usmani, K., Valas, R., Vera, V., Villasana, D., Waldron, L., Walker, B., Wang, J., Wang, Q., Wang, S., Warren, C., Waldron, L., Wei, X., White, F., Williams, G., Willson, R., Wleczyk, R., Wooden, H., Worley, K., Wright, D., Wright, R., Wu, Yakub, S., Yen, J., Yoon, L., Yoon, V., Yakub, S., Yen, J., Yoon, L., Yoon, V., Yu, F., Zhang, J., Zhou, J., Zhou, X., Zhao, S., Dunn, D., Yon Niederhausern, A., Weiss, R., Smith, D.R., Holt, R.A., Smith, H.O., Direct, Submission

W02003003979-A2 antiinflammatory; antiasthmatic; nephrotropic; antirheumatic; Human uteroglobin synthetic gene oligonucleotide 3. ABZ58372; (CLAR-) CLARAGEN INC. Welch RE;

Bacterial expression system for producing recombinant human uteroglobin for treating inflammatory and fibrotic conditions, comprises a synthetic gene which codes for human uteroglobin.

WPI; 2003-221527/21.

Claim 1; Page 33; 127pp; English.

The present sequence is that of oligonuclectide 3, which was used in the construction of a synthetic gene for the production of human uteroglobin (hUG) in bacteria. Oligonuclectides 1-4 (see ABZ58370-73) were used to assemble the coding strand and oligonuclectides 5-8 (see ABZ58374-77) the complementary strand. The gene was assembled by annealing and ligation of the oligonuclectides. Because mature native hUG has glutamic acid at its N-terminus, an initiator methionine was added to the N-terminus, and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match
of recombinant human uteroglobin (rhUG), comprising a synthetic gene or human cDNA sequence which codes for human UG, constructed from the oligonucleotides appearing as ADL27626-ADL27629, and which further comprises Net-Ala Ala at the N-terminus of the sequence. Also included are producing an rhUG master cell bank (comprising inoculating a suitable incubating broth with an aliquot portion of a rhUG research seed bank to form a bacterial culture, incubating the bacterial culture, adding a cryopreserved to the bacterial culture to form a cryopreserved solution, transferring a portion of the cryopreserved solution to a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 codon usage was optimised for expression in bacteria. In an example from the invention, the synthetic gene was cloned into plasmid pCG12 (see ABZ58378) and recombinant bUG (see ABP72259) was produced in Escherichia coli strain CG12. The invention relates generally to the production of recombinant bUG by bacterial expression, protein purification and scaled-up production according to current good manufacturing practices. The recombinant bUG is useful for the treatment of inflammatory and fibrotic conditions, such as neonatal respiratory distress syndrome and conditions, such as neonatal respiratory distress syndrome and bronchopulmonary dysplasma. It may also be used to treat conditions as the conditions are conditions as the conditions are conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Bacterial expression system for production of recombinant human uteroglobin comprising synthetic gene or human cDNA sequence which codes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (MELC/)

```
CC cryovial and storing the cryovial at a temperature below -60 degrees C), CC expressing rhUG (comprising providing a production seed cell bank culture comprising an expression vector capable of expressing rhUG, inoculating a CC inoculating a large scale fermenter with the inoculum formed from the continue within the large scale fermenter with the inoculum formed from the collure within the large scale fermenter, adding an induction agent to culture within the large scale fermenter, adding an induction agent to conture within the large scale fermenter, adding an induction agent to the fermentation culture to induce the expression of rhUG and harvesting the above fermentation culture), purifying rhUG, determining the potency cof rhUG in a sample, measuring in vitro anti-inflammatory effect arising from inhibition or blocking of secretory phospholipase A 2 enzymes by purity of rhUG, and a pharmaceutical composition comprising a purified crhUG and a carrier or diluent. The bacterial expression system is useful for producing a rhUG research seed bank or a pharmaceutical grade rhUG distress. The rhUG is useful for treating inflammation and fibrotic construct the synthetic rhUG gene.

WPI; 2003-221527/21. (CLAR-) CLARAGEN INC P Welch RE

Bacterial expression system for producing recombinant human uteroglobin for treating inflammatory and fibrotic conditions, comprises a synthetic gene which codes for human uteroglobin.

Example 1; Page 33; 127pp; English.

The present sequence is that of oligonucleotide 6, which was used in the construction of a synthetic gene for the production of human uteroglobin (hUG) in bacteria. Oligonucleotides 1-4 (see ABZ58370-73) were used to assemble the coding strand and oligonucleotides 5-8 (see ABZ58374-77) the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      coli strain CG12. The invention relates generally to the production of recombinant hUG by bacterial expression, protein purification and scaled-up production according to current good manufacturing practices. The recombinant hUG is useful for the treatment of inflammatory and fibrotic conditions, such as neonatal respiratory discress syndrome and conditions, such as neonatal respiratory discress syndrome and bronchopulmonary dysphasia. It may also be used to treat conditions associated with elevated phospholipase A2 levels such as pancreatitis, acute renal failure, rheumatoid arthritis and asthma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 complementary strand. The gene was assembled by annealing and ligation of the oligonucleotides. Because mature native hUG has glutamic acid at its N-terminus, an initiator methionine was added to the N-terminus, and codon usage was optimised for expression in bacteria. In an example from the invention, the synthetic gene was cloned into plasmid pCG12 (see ABZ58378) and recombinant hUG (see ABP72259) was produced in Escherichia
The invention relates to a bacterial expression system for the production of recombinant human uteroglobin (rhUG), comprising a synthetic gene or human cDNA sequence which codes for human UG, constructed from the oligonucleotides appearing as ADL27626-ADL27629, and which further comprises Met-Ala-Ala at the N-terminus of the sequence. Also included are producing an rhUG master cell bank (comprising inoculating a suitable incubating broth with an aliquot portion of a rhUG research seed bank to
                                                                                                                                                                                                                                                                                                                                                                                           Bacterial expression system for production of recombinant human uteroglobin comprising synthetic gene or human cDNA sequence which codes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                28-MAY-1997; 97US-00864357.

В Š

New recombinant fusion protein comprising desired protein - flanked by IgG-binding domain of staphylococcal protein A and albumin-binding domain of streptococcal protein G.

Synthetic IGF-II was constructed from 22 oligonucleotides.

The gene was

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC cryopreservative to the bacterial culture to form a cryopreservative to the bacterial culture to form a cryopreserved colution, transferring a portion of the cryopreserved solution to a cryovial and storing the cryovial at a temperature below -60 degrees C), conversing rhUG (comprising providing a production seed cell bank culture comprising an expression vector capable of expressing rhUG, incculating a production seed cell bank culture to form an crinculum, incubating the bacterial culture formed in step (b), incculating a large scale fermenter with the incculum formed from the crinculum colliture to form an crinculating a large scale fermenter, adding an induction agent to the fermentation culture, incubating the fermentation culture, and the production agent to the fermentation culture to induce the expression of thUG and harvesting the above fermentation culture), purifying rhUG, determining the potency of rhUG in a sample, measuring in vitro anti-inflammatory effect arising crompile of the colliture of thUG and a sample, measuring in vitro anti-inflammatory effect arising the purity of rhUG, and a pharmaceutical composition comprising a purified crincy and a carrier or diluent. The bacterial expression system is useful for producing a rhUG research seed bank or a pharmaceutical grade rhUG disters. The rhUG is safe to administer to a patient in respiratory classes. The rhUG is safe to administer to a patient in respiratory contents. The property the surpheric rhUG care.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       និនិនិនិនិនិនិ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RESULT 6
The invention describes a method of monitoring differential expression of CC genes in a first Bacillus cell relative to expression of the genes in cother Bacillus cells, comprising hybridising labelled nucleic acid probes isolated from Bacillus cells to a substrate containing array of Bacillus genomic sequenced tags (GST), examining the array, and determining crelative gene expression by an observed hybridisation reporter signal of CC a spot in the array. The method is useful for measuring the expression of genes in a first Bacillus cell relative to expression of the same genes coin one or more second Bacillus cells. The method is useful for monitoring CC global expression of several genes from a Bacillus cell, discovering new genes, identifying possible functions of unknown open reading frames and compitoring gene copy number variation and stabilty. Monitoring changes cin expression of genes may be used to provide a representation of the way in which Bacillus cells adapt to changes in culture conditions, converses or other physiological provocation. An N-terminal methionine codon was included to allow cleavage of fusion proteins with CNBr to generate native IgF-II. A double TAA stop codon was incorporated at the 3' end. the gene was used to construct a fusion vector with DNA coding for an IgG-binding domain from staphylococcal protein A and an albumin-binding part of streptococcal protein A and an abumin-binding part of streptococcal protein G. (Updated on 25-MAR-2003 to correct PA field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            -up characterisation is unnecessary, when one spot on an array equals one gene or one open reading frame, since sequence information is available. This sequence represents a genomic sequence tag (GST) used in the method of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

Novel nitrilase polypeptide, useful for making (R)- or 3-hydroxybutyric acid or (R)- or (S)-mandelic acid or (S) actic acid derivative and for producing pharmaceutical c (S)-ethyl-4-cyano
(S)- or (R)-phenyl
al composition, and

Claim 1; SEQ ID NO 317; 560pp; English.

This invention relates to nitrilases and the nucleic acids that encode these enzymes thereof. Specifically, it refers to polypeptides that exhibit nitrilase activity, i.e. the ability to directly hydrolyse nitriles or cyanohyrdins into their corresponding carboxylic acids and ammonia. Nitrilases have commercial utility as biocatalysts for use in the synthesis of enantiomerically pure aromatic and alighatic amino acids, as well as hydroxy acids, which are important for the development of chiral medicines. Furthermore, the present invention describes nitrilases, isolated from mesophila microorganisms, that have improved activity and stability at increased pH and temperature. They are also inexpensive, efficient catalysts, have broad substrate specificity and are capable of chiral differentiation. This polynuclectide is a DNA sequence that encodes a nitrilase enzyme of the invention.

                                                                                                                                  This invention relates to a novel method of monitoring chemical or biochemical processes. The method involves providing a reactant comprising cyanide (or a material that can be converted to a cyanide) that generates as a reaction product cyanide or a material that can be converted to cyanide and measuring the concentration of produced cyanide. The method is useful for monitoring a chemical or biochemical process. The method is effective for high throughput systems and is sufficiently sensitive to detect a small amount of product. The present sequence is that of a gene which encodes a nitrilase enzyme which can be used in the method of the invention.
                                                                                                                                                                                                                                                                                                                      Monitoring a chemical or biochemical process comprises providing a reactant comprising a cyanide or a material that can be converted to cyanide or a reactant that generates a cyanide or a material that can converted to cyanide.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention is related to a novel isolated or recombinant nucleic acid encoding a protein having nitrilase activity. Nitrilase's are capable of converting nitrile's directly to carboxylic acids and have great potential for use in industrial chemical processes. The isolated nitrilase proteins of the invention have increased activity and stability at increased pH and temperature when compared to those conventionally
   Unidentified

                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 993
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 used. In addition, the nucleic acid of the invention is useful for screening enantioselective transformation. The present sequence is that of a DNA sequence which encodes a nitrilase enzyme of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              nitrilase activity, useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     nitrilase; nitrile; carboxylic acid; chemical process; pH; enantioselective transformation; gene; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Nitrilase enzyme gene sequence
                                                                                                                                          DNA encoding nitrilase polypeptide #159.
                                                                                                                                                                             22-APR-2004

The method comprises optionally converting epichlorohydrin or equivalent to 3-hydroxyglutaronitrile, catalytic conversion of 3-hydroxyglutaronitrile or equivalent to 4-cyano-3-hydroxybutyric to ethyl-4-cyano-3-hydroxybutyric converting 4-cyano-3-hydroxybutyric to ethyl-4-cyano-3-hydroxybutyric acid, and converting this to (R)-ethyl 4-cyano-3-hydroxybutyrate. The method involves whole cell processes, cell lysate process, "one por processes, and "multi-pot" processes using a variety of parameters. Atorvastatin is used, in conjunction with dietary restriction, in the management of hyperlipidaemia, including hypercholesterolaemia. The present sequence encodes a nitrilase polypeptide obtained from an environmental
                                                                                                                                                                                         (R)-ethyl 4-cyano-3-hydroxybutyric acid; nitrile hydrolysis; carboxylic acid; cyanohydrin moiety hydrolysis; aminonitrile moiety hydrolysis; chiral alpha-hydroxy acid molecule; chiral amino acid molecule; (S)-ethyl 4-cyano-3-hydroxybutyric acid; (R)-mandelic acid; (S)-mandelic acid; (S)-mandelic acid; (S)-phenyl lactic acid derivative; (R)-phenyl lactic acid derivative;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention describes an isolated or recombinant polypeptide (I) comprising amino acids having a sequence at least 50 % identical to a sequence (S1) available in electronic form (EC) from the following web site ftp.seqdata.uspto.gov/sequence.html?DocID=2004014195, or its C variants, having one or more mutations at residue 55 Lys, Gly or Glu, at residue 60 glutamic acid, at residue 111 Ser, their combinations or fragments. (I) is useful for: producing an (R)-ethyl 4-cyano-3-thydroxybutyric acid, hydrolysing a nitrile to a carboxylic acid, hydrolysing anyanohydrin moiety or an aminonitrile moiety; producing a chiral alpha-hydroxy acid molecule or a chiral amino acid molecule; producing an (S)-ethyl 4-cyano-3-hydroxybutyric acid, producing an (R)-ethyl 4-cyano-3-hydroxybutyric acid, groducing an (R)-mandelic acid or (S)-mandelic acid, producing (S)-phenyl lactic acid derivative; modifying a molecule; and for identifying a modified compound. The inventive method is useful for monitoring or determining % enantiomerric excess or % diasteromerric excess (I) is useful in the production of food additives and drug continued and continued acid continued and continued acid continued and continued acid continued 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABS57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                         Streptococcus pneumoniae; type 4 strain
                                                                                                                                                                                                                                                                     Gene; ds; bacterial meningitis; pneumonia; sepsis; otitis media; ear infection; antiinflammatory; antibacterial; immunostimulant; auditory; respiratory; gene therapy; vaccine.
                                                                                                                                                                                                                                                                                                                                  S. pneumoniae type 4 strain coding region #2428
                                                                                                                                                                                                                                                                                                                                                                 27-OCT-2003

cc be amplified, assay comprising contacting a test compound with the compretein, and determining whether the test compound binds to the protein and a Streptococcus pneumoniae bacterium, where one or more genes concoding the proteins has been rendered inactive. The proteins, nucleic encoding the proteins has been rendered inactive. The proteins, nucleic acid molecules, antibody and compositions are useful as medicaments for treating or preventing a disease or infection due to streptococcus bacteria, particularly S. pneumoniae, such as pneumonia, sepsis, otitis media or ear infection. They are also useful in developing vaccines, cd diagnostics and antibiotics. The methods are useful for identifying immunodominant proteins. The present sequence is one of the 2489 cd identified coding region from the genomic sequence. Note: The sequence data for this patent did not form the part of the printed specification, but was obtained in electronic format directly from WIPO at the fip.wipo.int/pub/published_pct_sequences. (Updated on 27-OCT-2003 to compare the comparence of the 2480 of the protein format directly from wipo at the protein format comparence of the 2480 of the protein format directly from WIPO at the sequence of the 2480 of the protein format directly from wipo at the protein format comparence of the 2480 of the protein format directly from wipo at the protein format comparence of the protein format directly from wipo at the protein format comparence of the protein format directly from wipo at the protein format comparence of the protein format directly from wipo at the protein format comparence of the protein format directly from wipo at the protein format directly from wipo at the protein format comparence of the protein format directly from wipo at the protein format directly from wipo at the protein format directly from wipo at the protein format comparence of the protein format directly from wipo at the protein format directly from wipo at the protein format directly from the protein format directly from 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a protein comprising or having at least 50% identity to any of the 2469 amino acid sequences, identified in the specification (available on a computer readable format), or its fragment, expressed from 2469 of 2489 identified DNA coding regions from the Streptococcus pneumoniae type 4 strain genomic sequence appearing as ABS56454. Also included are an antibody which binds one of the proteins, treating a patient by administering the protein, DNA or antibody (in a composition), a kit comprising first and second primers, which are the nucleic acid cited above or fragments between nucleotides 8-100 of a sequence not defined in the specification, for amplifying a target sequence contained within a Streptococcus nucleic acid sequence, where
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          the first primer is substantially complementary to the target sequence and the second primer is substantially complementary to the complement of the target sequence, and where the parts of the primers having the target sequence to substantial complementarity define the termini of the target sequence to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New proteins and nucleic acid molecules from Streptococcus pneumoniae, useful as medicaments for treating or preventing a disease or infection due to streptococcus bacteria, such as pneumonia, sepsis, otitis media or ear infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 6; SEQ ID NO 4855; 56pp; English.

The present invention describes a computer readable medium which has the nucleotide sequences SEQ ID NO:1 to 391 (AAV52134 to AAV5254) recorded on it, or a representative fragment or a sequence at least 95% identical to SEQ ID NO: 1 to 391. The nucleotide sequences depicted in SEQ ID NO:1 to 391 (AAV52524) are genomic fragments from Streptococcus
                                                                                                                             Computer-readable medium with recorded Streptococcus pneumoniae polynucleotide sequences - useful in diagnostic kits and assays, and pharmaceutical compositions and vaccines for Streptococcus pneumonia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This invention relates to novel isolated Streptococcus pneumoniae nucleic acid molecules and the antigenic polypeptides encoded by them. The invention may be useful for the production of compounds with an antibacterial activity or for gene therapy. The nucleic acid molecules, compositions and methods disclosed are useful for treating Streptococcus pneumoniae infection. The present sequence is that of an S pneumoniae gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New Streptococcus pneumoniae nucleic acid molecules, useful for diagnosing, treating and preventing active infections of Streptococcus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Streptococcus pneumoniae; S. pneumoniae; genome; diagnosis; assay; computer readable medium; vaccine; pharmaceutical composition; ds.

pneumoniae. The present invention also describes an isolated nucleic acid comblecule encoding a homologue of any of the fragments of the S.pneumoniae CR DID NO:1 to 391) where the nucleic acid molecule is produced by a process comprising: (a) screening a genomic DNA library using as a process comprising: (a) screening a genomic DNA library using as a process comprising: (a) screening a genomic DNA library using as a process comprising: (a) screening a genomic DNA library using as a process to the fibrary which contain sequences that comparison to the target sequence and isolating the nucleic acid molecules from the members; or (b) isolating mRNA. DNA or cDNA produced from an CC organism, amplifying nucleic acid molecules whose nucleic acid molecules corganism, amplifying nucleic acid molecules whose nucleotide sequence is homologous to amplification primers derived from the fragment of the S. pneumoniae genome to prime the amplification and isolating the amplified CC sequences. The computer readable medium can be used in a computer-based commercial importance, or expression modulating fragments of the S. pneumoniae genome. Products from the present invention can be used in diagnosis kits and assays, and pharmaceutical compositions and vaccines
                                                                         for S. pneumoniae

Use of Recombinant Human Uteroglobin in Treatment of Inflammator
TITLE OF INVENTION: Use of Recombinant Human Uteroglobin in Treatment of Inflammator
TITLE OF INVENTION: Fibrotic Conditions
FILE REFERENCE: 11612/2
CURRENT APPLICATION NUMBER: US/08/864,357F
CURRENT FILING DATE: 1997-05-28
NUMBER OF SEQ ID NO.11
LENGTH: 59
TYPE: DNA
ORGANISM: artificial
; FEATURE:
; OTHER INFORMATION: primer sequence

Patent No. 6551795

GENERAL IMPORMATION:
APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVENTION: ARRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: 107196.136

CURRENT APPLICATION NUMBER: US/09/252,991A

CURRENT PILING DATE: 1999-02-18

PRIOR APPLICATION NUMBER: US 60/074,788
